

# Extended Travel C.V. Axles

DESIGNED SPECIFICALLY FOR LIFTED VEHICLES

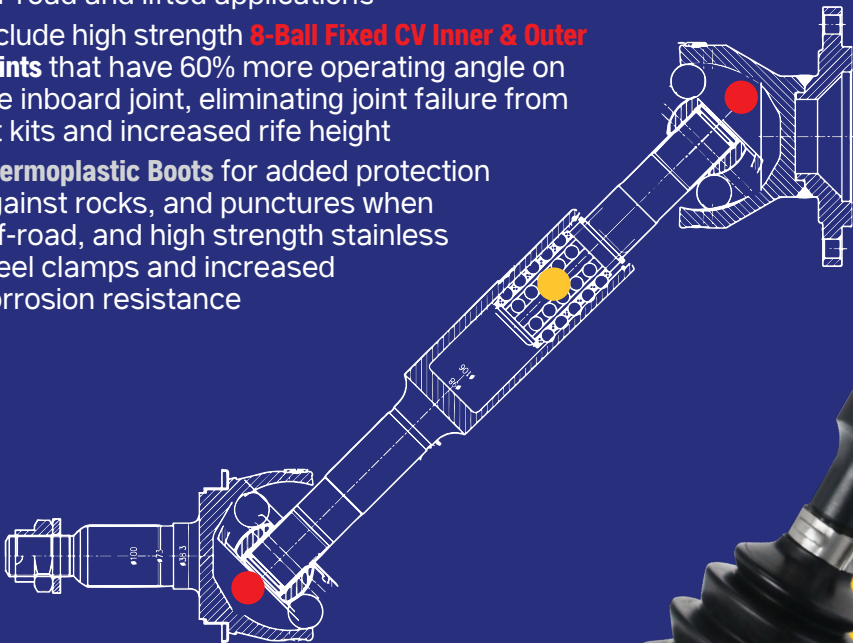

The only C.V. Axle assembly in the aftermarket designed for lifted applications that offers a lifetime warranty against defect and workmanship.

**NEW**

A lifted vehicle dramatically increases the stresses of stock components and often exceeds the original design limitations. NAPA® Extended Travel C.V. Axles utilize a sliding center shaft that provides greater linear travel than an OEM C.V. shaft, which allows for greater suspension travel for off-road and lifted applications. Additionally, high strength C.V. inner and outer joints have 60% more operating angle on the inboard joint, eliminating joint failure from lift kits and increased ride height.

#### KEY BENEFITS:

- Utilize a **Sliding Spline Center Shaft** that provides up to a full 40mm greater linear travel than OE, which allows for greater suspension travel for off-road and lifted applications
- Include high strength **8-Ball Fixed CV Inner & Outer Joints** that have 60% more operating angle on the inboard joint, eliminating joint failure from lift kits and increased ride height
- **Thermoplastic Boots** for added protection against rocks, and punctures when off-road, and high strength stainless steel clamps and increased corrosion resistance
