

New Monobloc Tube C.V. Axles

DESIGNED FOR INCREASED STRENGTH IN SMALLER SPACES

Now Available for the Aftermarket

NEW

New Monobloc Tube CV Axles from NAPA® are designed with the latest in axle technology including OE applications requiring one-piece monobloc center bars. The monobloc tube design greatly reduces NVH (noise, vibration, and harshness) and provides the same quiet, smooth operation as the OE design.

KEY BENEFITS:

- Increased strength in a smaller lighter diameter bar
- The tube center section can be precisely profiled to cancel out the natural harmonic frequencies specific to a particular vehicle to greatly reduce noise, vibration, and harshness (NVH)
- Provide the same dependable quiet, smooth ride as designed by OE
- **Monobloc Tube Design**
Provides improved strength in a smaller, lighter diameter bar, allowing the shaft to fit into smaller spaces where a larger traditional tube shaft would not have room

FIT

Designed for applications where new technology is required for fitment.

FORM

Provide an OE solution on late model vehicles requiring increased strength in a smaller, lighter diameter bar.

FUNCTION

Operate like the OE axle providing the same driving feel and standards for noise, vibration & harshness.
